

Ex. No. 2	Working with HTML5 Form and Media Elements
Date of Exercise	26.07.2026
GitHub Host Link	https://github.com/TheepanURK24CS1099/WEB-TECHNOLOGY-LAB.git

Aim

To design and develop an HTML5-based Wildlife Conservation Site that demonstrates the use of form controls and media elements such as audio, video, embed, and iframe, along with standard HTML5 structural tags.

Description

This exercise focuses on building a Wildlife Conservation webpage that combines informational content with interactive form and media elements. The page uses `<div>`, headings, and `<p>` tags to present details about endangered animals, and a clickable `<img>` linked to the WWF website. Media elements such as `<audio>` (forest ambience), `<video>` (an HTML5 video demo), `<embed>` (a conservation report infographic), and `<iframe>` (an embedded overview) are used to enrich the content. A `<form>` is included to let visitors register as volunteers, using `<fieldset>`, `<label>`, various `<input>` types, `<select>`, and `<progress>` to collect and display registration details.

Procedure:

1. Decide the theme (Wildlife Conservation Site) and plan the sections: header, image, audio, video, embed, iframe, table, and form.
2. Create a new HTML5 file and begin with `<!DOCTYPE html>`, followed by `<html>`, `<head>`, and `<body>` tags.
3. Add a `<title>` and use `<div>`, `<h1>/<h2>` headings, and `<p>` tags to structure the page content.
4. Insert an `<img>` of a tiger wrapped in an `<a>` anchor link to the WWF website.
5. Add an `<audio>` element with a `<source>` tag to play forest ambience sounds.
6. Add a `<video>` element with a `<source>` tag to demonstrate the HTML5 video tag.
7. Add an `<embed>` tag to display a conservation report infographic.
8. Add an `<iframe>` to embed an overview section on the page.

9. Create a <table> listing endangered animals and their status.
10. Build a <form> with a <fieldset> and <legend> for "Personal Details," using <label> with <input> types (text, email, date, radio, file), a <select> dropdown, a <progress> bar, and submit/reset buttons.
11. Add HTML comments before each section for clarity.
12. Save the file and open it in a browser to verify that all elements display and function correctly.

Program:

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

Result

The HTML5 Wildlife Conservation Site was successfully designed using form and media elements. All tags including audio, video, embed, iframe, and form controls rendered and functioned correctly in the browser, and the output matched the required layout.
