

Ex. No. 3	Design a Web Page using HTML and CSS
Date of Exercise	23.07.2026
GitHub Host Link	https://github.com/TheepanURK24CS1099/WEB-TECHNOLOGY-LAB.git

Aim:

To design and develop a webpage using HTML5 tags and apply styles to the webpage using CSS3 properties and layouts like normal flow and multi-column layout.

Description:

This exercise focuses on enhancing the wildlife conservation themed webpage created in the earlier exercises through CSS3 styling. It involves applying box-model properties such as margin and padding to control spacing between sections, formatting text using properties like color, letter-spacing, text-align, text-decoration and text-shadow, customizing fonts through font-family, font-style, font-weight and font-size, setting background colors and background images for the header, styling hyperlinks using the :link, :visited, :hover and :active pseudo-classes, and using layout properties such as display, list-style-type, height and width to arrange elements like the navigation bar, focus-area cards, impact statistics and team member profiles.

Procedure:

1. Plan the sections of the webpage — header/banner, navigation bar, about section, focus areas, impact statistics, ways to help, and team section — based on the wildlife conservation theme.
2. Open the existing HTML5 file (index.html) from the earlier exercises in a text editor such as VS Code.
3. Within the <style> tag, define CSS3 rules for each section:
 - a. Use the margin and padding properties to space out sections, cards, and list items.
 - b. Format text using color, letter-spacing, text-align, text-decoration, and text-shadow for headings and paragraphs.
 - c. Apply font-family, font-style, font-weight and font-size to customize headings and body text.
 - d. Set background-color and a background-image (with background-size and background-position) for the header/banner section.
 - e. Style navigation links using the :link, :visited, :hover and :active pseudo-classes.
 - f. Use display (flex/inline-block) to lay out the focus-area cards, statistic boxes, and team member cards, along with list-style-type for bulleted lists.
 - g. Set the height and width of images, cards and containers as required.
4. Apply hover transitions (transform and background-color) to the focus-area cards and team member cards for interactivity.

Output

Result

The given webpage was successfully styled using HTML5 and CSS3 properties including margins, padding, text formatting, fonts, backgrounds, link pseudo-classes, flexbox layout, and hover transitions. The output matched the expected design, with a well-structured header, navigation bar, focus-area cards, impact statistics, help section, and team profiles.
